

## FM-240D Double-End Tenoner

This machine, a double-end tenoner, is among the most versatile in the industry. It can produce a four-side finished panel in seconds and is capable of trimming, scoring, grooving, profiling, sanding, edge banding and a variety of other processes – all with the material in continuous motion. The FM-240D creates very accurate panels with regard to symmetry and parallelism.

As for material, the machine can process MDF, plywood, hardwood, softwood, laminates, plastics and other products. The caterpillar style feed and hold down chains allow it to firmly grasp materials and maintain a secure embrace on even narrow substrates. The pads on each chain allow for parts already surface laminated to run face-up or face-down. The FM-240D has proven itself over time to be a reliable and easy to maintain production machine.
